SKILLS

Programming Languages:

C#, C++, Java

Game Engine:

Unity (2D/3D)

Gameplay & Architecture:

Modular gameplay systems, Event-driven logic, Object Pooling, State management

Asset Management

Unity Addressables (Local & Remote groups), Runtime loading/unloading lifecycle

Optimization:

Low-end Android tuning, frame-time stability, memory profiling, GC reduction,

Monetization Integration:

Ad request/display flow control (interstitial, rewarded), gameplay-aware triggering logic

ABOUT ME

Unity Gameplay Developer with hands-on experience delivering complete hyper-casual mobile titles, taking ownership of core gameplay mechanics, UI architecture, and overall game flow from prototype to release.

Contributed to large-scale MMORPG production by developing UI modules and gameplay-support systems, including item, equipment, and event features.

Experienced in runtime performance optimization and Unity Addressables for both local and remote asset delivery.

Strong analytical and problem-solving skills backed by competitive programming experience.

WORK EXPERIENCES

UNITY DEVELOPER

WOLFFUN GAME

05/2025 - 06/2026

- Acted as the sole developer per project within cross-functional teams (Game Designer, QA), owning full technical implementation lifecycle.
- Translated game design documents into structured and maintainable gameplay systems.
- Implemented core mechanics, level progression, UI systems, and state management aligned with internal framework standards.
- Integrated and customized internal monetization packages, controlling ad request and display timing based on gameplay flow and user experience considerations.
- Implemented Unity Addressables for asset management, configuring both local and remote groups to support dynamic content loading and update workflows.
- Managed runtime asset loading/unloading lifecycle to optimize memory usage and prevent performance spikes.
- Handled remote content download flow, ensuring stable behavior under varying network conditions.
- Optimized runtime performance for stable FPS and memory usage on low-end Android devices.
- Managed build preparation and release processes for production deployment.

Published titles:

- Number Match Master: 10 & Pair
- Jigsaw Collection
- Zen Number: Match Tiles

PROJECTS

BALLS FALL: DROP THEM ALL

12/2025 - 03/2026

- Collaborated within a 4-member indie team (Product Owner, Game Designer, Artist, Developer) to develop and launch a 3D puzzle mobile game.
- Implemented core gameplay mechanics, level content, UI, ADS, and IAP
- Worked closely with designers and artists to rapidly iterate gameplay based on testing and publisher feedback.

Published via Voodoo:

- Balls Fall: Drop Them All

EDUCATION

INFORMATION TECHNOLOGY

VNUHCM - UNIVERSITY OF SCIENCE

PRIZES AND AWARDS

UNIVERSITY

Second prize at Qualified Supercup Olympiad in Informatics

Silver medal at National ICPC in online stage.

* Use C++ to participate in the above competitions .

HIGH SCHOOL

Third prize at Vietnam Olympiad Informatics.

Gold medal at Olympiad 30/4 in Informatics.

UNITY DEVELOPER

GIHOT STUDIO

03/2024 - 04/2025

- Implemented and maintained production-level UI and gameplay-support systems including Shop, Guild, Marketplace, Equipment, and in-game Events.
- Developed item logic, state handling, and client-side validation aligned with backend APIs.
- Coordinated closely with server-side developers to ensure consistent client-server synchronization.
- Built dynamic and data-driven UI components for feature scalability and live updates.
- Handled bug fixing and runtime stability improvements in a live MMORPG environment.
- Publish: SROM

GAME PROGRAMER

GAMELOFT VIỆT NAM

11/2023 - 01/2024

- Contributed to development and maintenance of Asphalt 9 within a large-scale C++ production codebase.
- Worked under structured production pipelines and code review processes.
- Focused on performance optimization and stability improvements.

FRESHER UNITY DEVELOPER

EGITECH COMPANY

11/2022 - 09/2023

- Developed and published multiple hyper-casual mobile games using Unity and C#.
- Participated in full-cycle implementation including gameplay logic, UI systems, effects, and ad integration.

FRESHER DEVELOPMENT FRESHER

VNG CORPORATION

05/2022 - 08/2022

- Worked on multiplayer game prototype in collaboration with ZingPlay Studio
- Implemented both client and server components (primarily Java server-side).
- Gained exposure to multiplayer game architecture and backend coordination.
